

# OspynDocs Business Process Management

Bridging the process gaps  
and assuring business  
connectivity on the go

 [www.ospyn.com](http://www.ospyn.com)

Ensure **quicker decision making** and **faster turnaround time** with **100%** visibility and accuracy across your business processes, collaborations and approvals

Is the **new normal** disrupting your business processes connecting customers, vendors and administration in addition to your core processes?

## If these **challenges** sound familiar, it is time to acquire a **BPM engine**

Process disconnectivity due to information residing in various applications

Delays of manual & paper dependent processes in hybrid work place

Less process visibility due to scattered communication modes like emails and manual modes

Poor integrations resulting in data entry, spreadsheets and other information gatherings

Complete vendor dependency for each process configuration due to code level changes

Uninformed decision making leading to errors and multiple iterations

Restricted access leading to process delays and pending approvals

Manual data transfer and updation across applications leading to error prone information and data loss

**OspynDocs Low-code BPM** offers GUI based workflows to route tasks dynamically and enable agility in your business processes with real time-automation, quicker configuration and user-friendly UI

# Platform Perks

## Collaboration on the go

- GUI based workflows connecting all stakeholders
- Permissions and access settings based on user levels
- Approvals on the go from anywhere at anytime in any device
- High end document collaboration tools for informed decision making

## Visual Interface

- Drag-drop configurations to create & modify business processes
- User friendly screens with lucid UI and interactive messages
- Configurable templates to predefine document format
- Personalized dashboard with analytics and calendar notifications

## Uninterrupted data flow

- Rest APIs to connect with core systems and other existing applications
- Integrates with other applications for automated data transfer and field auto-population
- Centralized data access with single sign-on
- Automated updation of processed data across core systems

## E-form Builder

- Form builder to create forms with specific attributes
- Form based data collection with predefined components
- Enables field validation against defined rules or external tables
- Supports addition of various Text fields like Text Area, Number, Email, URL, Phone and Password

# Benefits

- ✓ Quicker rollout of processes
- ✓ Instant decision making
- ✓ Assured business agility
- ✓ Configurations by non-IT professionals
- ✓ Consolidated view of data
- ✓ Faster TAT during operations
- ✓ 360-degree visibility into processes
- ✓ Improved business functionality
- ✓ ROI within a year
- ✓ Improved productivity with assured security
